

INTERNATIONAL PROCUREMENT SERVICES (OVERSEAS) LTD

NEW OSCOR Software Release 5.0 Available May 2004

With newer surveillance threats and advancing technology, REI has developed new software algorithms that are specifically designed to greatly increase the probability and speed of detection for sophisticated threats such as Frequency Hopping, Burst Transmitters, Spread Spectrum signals.

The current Oscore system will certainly detect these types of transmitters, however we have developed new methodology to increase detection reliability and improve the user interface for detecting these types of threats. The new system is now available and a primary screen shot of the software is shown below.

With the new release of the OSCOR OPC 5.0 software, OSCORs will no longer be sold without the OPC software beginning 1 May 2004. The OPC software will now be packaged with the OSCOR, and the OSCOR pricing will be increased to include the software.
